- [Apache Kafka](#)
- [Opensearch](#)
- [Installer](#)

# Vector

At the core of ALPACA vector is doing most of the heavy lifting.

It can be downloaded at: [www.vector.dev](http://www.vector.dev)

# Apache Kafka

Between each major operation data is buffered.

Alpaca uses apache-kafka as a proven/reliable/scalable solution.

It can be downloaded here: <https://kafka.apache.org/>

# Opensearch

opensearch is used for datalake and dashboarding.

It can be downloaded here: <https://opensearch.org/>

# Installer

The installer is a set of Ansible playbooks

A complete tar-file can be downloaded here and can be placed in a pre-existing ansible-environment.

An installer for an "All-in-one" server (single-node) can be found here: <TODO>
